% keyboard_doc.txt original file name.          An idea of Bernard Gaulle 93/08/17

%
%                                     Copyright Bernard Gaulle as in french_doc.pdf

%
%                                     last mods 2002/03/21

%
% A LaTeX package able to customize LaTeX accordingly to your keyboard and
% translate a text from any input encoding to your own screen chars.
%
% Usage:      \documentclass[any_option]{any_class}
%             \usepackage[options]{keyboard}
%
% Among options you can choose:
%
% - the keyboard input encoding
%   =====
%   ansinew, for ANSINEW encoding (Windows)
%   latin1, for ISO-Latin-1 (8859-1) remember: without french \oe!
%   latin9, for ISO-Latin-9 (8859-15) remember: with french \oe!
%           *default* if no keyboard.dat (user config. file)
%           and no keyboard.cfg (site config. file).
%   decmulti, for Dec Multinational
%   cp850, for PC DOS code page 850.
%   applemac, for usual Mac keyboards.
%   next, for Next engines.
%   ascii, for no input encoding. This is also an output option.
%
% or any other of your choice assuming a xxx.kbc file exists.
% (You can need to configure your own xxx.kbc file because
% currently default xxx.kbc files are specially configured for French users)
%
% - the keyboard output encoding when using \kbtypeout{message}
%   =====
%   8b, force 8-bit output.
%   7b, force "a la TeX" output, ie with macros such as \'e for e-accute.
%           (never expand to any 8bit character).
%   ascii, full 7bit coding output. This is also an input option.
%   ansi **no more used**
%   onlychars, will output only chars defined as such (\catcode 11 or 12).
%   nooutputencoding for "do nothing when type out".
%
% This is currently just an input encoding.
% Will be also output encoding in a next version.
%
